Subtraction of Unlike Fractions

To find the difference between two unlike fractions, we follow the following steps

Step 1 Find the LCM of denominator of unlike fractions.

Step 2 Convert unlike fractions into equivalent like fractions with their LCM as common denominator.

Steps 3 Find the difference between the like fractions so obtained.

For example Find the difference.

$$(a) \quad 7/8 - 5/12$$

$$\text{LCM of 8 and 12} = 24$$

$$\text{Now, } 7/8 = 7/8 \times 3/3 = 21/24 \quad \text{and} \quad 5/12 = 5/12 \times 2/2 = 10/24$$

$$7/8 - 5/12 = 21/24 - 10/24 = \frac{21 - 10}{24} = \frac{11}{24}$$
