Class: 4th Subject: Maths

Comparison of Fractions with unlike Numerator and unlike Denominator

Step 1 Find the LCM of denominator of given unlike fractions

Step 2 Convert the unlike fractions into equivalent like fractions with the LCM as Common denominator

Step 3 compare the like fractions so obtained

If one or more of the given fractions is/are mixed fractions convert them into improper fractions before the following the above steps.

For example Compare $5/6$ and $4/9$

Solution The given fractions are unlike fractions

$$\text{LCM of 6 and 9} = 18$$

$$5/6 = 5 \times 3 / 6 \times 3 = 15/18$$

$$4/9 = 4 \times 2 / 9 \times 2 = 8/18$$

Clearly $15/18 > 8/18$

Hence $5/6 > 4/9$

Arrange the following fractions in ascending order

$5/8, 3/4, 7/12, 2/3$

We shall change them into equivalent fractions with a common denominator

This common denominator is the LCM of 8,4,12,3 = 24

Changing each of the given fractions into an equivalent fraction with denominator 24, we get

$$5/8 = 5 \times 3 / 8 \times 3 = 15/24 \quad 3/4 = 3 \times 6 / 4 \times 6 = 18/24$$

$$7/12 = 7 \times 2 / 12 \times 2, \quad 2/3 = 2 \times 8 / 3 \times 8 = 16/24$$

Clearly, $14/24 < 15/24 < 16/24 < 18/24$

So, $7/12 < 5/8, < 2/3, < 3/4$

Hence, the given fractions in ascending order are $7/12, 5/8, 2/3, 3/4$

Q. 1 Fill in the placeholder with the symbol $>$, $<$ or $=$ to make the statement true in the note book.

(a) $5/8$ ----- $7/4$ (b) $4/6$ ----- $6/9$ (c) $7/4$ ----- $13/3$

Q. 2 Arrange the following fractions in an ascending order

(a) $1/3, 3/10, 5/6, 2/5$ (b) $4/5, 7/10, 8/15, 1/2$

Q. 3 Arrange the following fractions in a descending order.

(a) $3/4, 7/8, 7/12, 17/24$ (b) $3/8, 1/2, 5/6, 2/3$
